

Email Security

Stop email threats before they reach your mailbox

Enterprise-level email security

IT-Logik — in conjunction with SpamTitan — are offering an enterprise level protection service for your emails.

Email is by the most common route by which malware is transmitted, including viruses and ransomware. While essential, local anti-virus protection may not be enough, and it's unequivocally business-critical that these threats don't make it through to your inboxes.

Our email security (HES) services integrates with your own dedicated email server, as well as any hosted email server, either provided by IT-Logik or a third party company. Our service can be used in conjunction with Office 365, and we've found that it's easier for clients to use than Microsoft's Advanced Threat Protection.

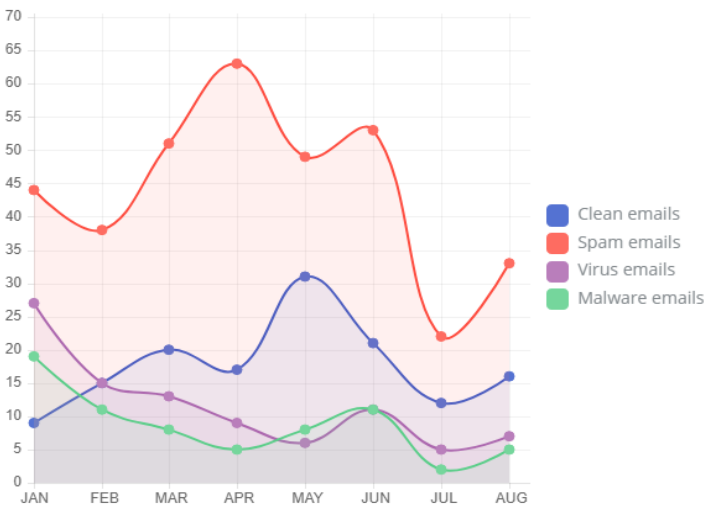

Configure your mail domain to send emails to our HES servers which will handle the email filtering, stopping 99.99% of potential threats before it reaches the mail server and the end users' mailboxes.

- **Protects against viruses, phishing and more**
- **Up to 99% reduction in SPAM emails**
- **Protection for email servers**
- **Allows blacklisting & whitelisting of emails**
- **Easy-to-use control panel**
- **Email quarantine reporting**

PROVEN SPAM BLOCKER

Below is an example of the level of protection you will receive for your business against viruses, malware, phishing, and SPAM emails — considering approx. 18% of emails are legitimate.

Scan Summary % - 2019

EMAIL REDUDANCY

Our security solutions offers another layer of protection for your email: if your infrastructure cannot accept email for any reason, our systems store the messages for 14 days.

EASY TO USE CONTROL PANEL

You and your staff have access to a web control panel where you could filter your organisation's email traffic by whitelisting or blacklisting email addresses or domains. This task can be managed at a domain level, and every user who has a mailbox can also manage his or her own filtering.

Each user can also set up daily email reporting for review in case of a false positive, and can easily release any blocked emails.

HES OUTLOOK PLUGIN

You can use SpamTitan Outlook plugin which will enable the user to blacklist email via Outlook application in real time without having to login to the web control panel.

GDPR & HOSTING

GDPR (General Data Protection Regulation) is a piece of EU legislation that came into effect on the 25th May 2018 for all EU countries.

Its core aim is to establish a set of rules that define how we protect someone's data. A lot of the regulations in GDPR are very similar to those found under the data protection act. It only applies to you if you handle an EU citizens data.

IT-Logik (the 'controller') follows GDPR rules as far as delivering a hosted environment whereas the customer (the 'processor'), is the owner and controller of the data held on the hosted platform.
